

Carriageway Resurfacing

This process will involve removing the surface layer of the tarmac and replacing with new material.

Due to the large machinery used to surface the carriageway, traffic management will be in operation to enable us to safely carry out these works in a timely manner.

Advance warning signs will be erected stating the start time and the duration of the works.

Works may be carried out overnight on major routes or in certain locations which have been identified as causing exceptional disruption to the surrounding area if work was undertaken during the daytime.

On the day of the works please don't park in the road unless you have off-street parking.

Access to properties will be maintained where possible. However, during periods when materials are being laid, access may be limited. If you have any queries or concerns about access during the works please ask for the site foreman who will be happy to help you.

When driving on the new surface, please keep to the signed temporary speed limits and avoid heavy braking to allow the surface to stabilise.
